

Question 1:

- Provide a quick explanation for the statements that are **False**:
 1. The principle requirement of PRNG is that the generated number stream be unpredictable.
 2. With true random sequences each number is statistically independent of others and therefore unpredictable.
 3. The pseudorandom number generator may simply involve conversion of an analog source to a binary output.
 4. Examples of a pseudorandom function are decryption keys and nonces.
 5. A widely used technique for pseudorandom number generation is an algorithm known as the linear congruential method.
 6. The security of Blum, Blum, Shub is not based on the difficulty of factoring n .
