

## Email Threats: Question 3 A

- Imagine that you are a member of the security team at the University of Bern and many students and employees reported phishing emails in the past few hours. Unfortunately, some of them clicked on the link in the e-mail, were redirected to a malicious website looking like the official ILIAS website and tried to log in with their credentials.
- What would be your immediate reaction on such incident?

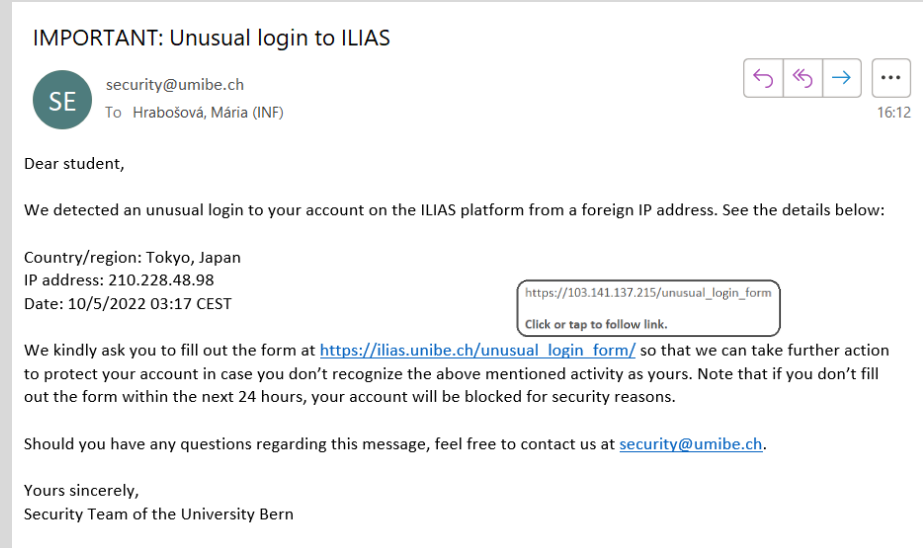

# Email Threats: Question 3 B

- You can see the phishing email from question A in the figure. What's suspicious about it?

# Email Threats: Question 3 B

- You can see the phishing email from question A in the figure. What's suspicious about it?

## Email Threats: Question 3 C

- You want to make the University less prone to phishing attacks. What would you do to raise the awareness of the students and employees so that there's a lower chance that they will be fooled by such emails in the future? The best and most creative suggestions will be granted with extra points :)
